1.1 Introduction

Florida Online Recipient Integrated Data Access (FLORIDA) System is the state's eligibility system of record for the Child in Care (CIC) programs. Program types include Foster Care, Expedited Medicaid, Independent Living, and Adoption Subsidy.

Florida Safe Family Network (FSFN) has a two way interface with FLORIDA in order to automate the submission for eligibility. This will replace the current process where the Rev Max worker completes the forms and mails to CIC for manual entry to the FLORIDA system by a CIC worker. The eligibility forms utilized are as follows:

- Child in Care Medicaid Eligibility (2293). If the record transmitted to FLORIDA is Medicaid Only, then Child In Care Medicaid Application (2293) is not required.
- Child in Care Eligibility Review and Change Report Form (2694)

The FSFN/FLORIDA Interface will automate the transfer of eligibility data. The Interface is responsible for passing the respective eligibility data captured in FSFN to FLORIDA using the following distinct data transactions:

- Initial: Initial submission of FSFN eligibility data to the FLORIDA system to establish Title IV-E Determination and/or Medicaid eligibility.
- Change: To inform CIC of any changes to the demographics of case participant submitted through the interface. Selecting the "Change" action on the Initiate Action page will not initiate the ASRE driver when Submit to FLORIDA is selected from the Medicaid Eligibility page. Note, however, that the ASRE driver can be initiated manually where appropriate – at the discretion of the CIC worker. The documents that are launched will be transmitted to the Work Manager queue (AMS) and the CIC worker will need to review the documents and update FLORIDA and the AMS system manually.
- Close: Submission of eligibility data from FSFN to FLORIDA causing the child eligibility record to close.

All transactions from FSFN will be initiated from the Medicaid Eligibility module. The automated data for each transaction are standardized and modeled after the forms listed previously in this section. These automated data transactions will be accomplished by using IMS Connect technology to enter data into the FLORIDA online business processes.

1.2 Child in Care Programs

1.2.1 Title IV-E/ Medicaid

Data for both Title IV-E Foster Care and Medicaid programs for children in care are collected in FSFN and passed to FLORIDA for processing through the FSFN/FLORIDA Interface using a FLORIDA living arrangement code of 28 (foster care). Note, however, that all Title IV-E Foster Care Eligibility determinations are handled completely in FSFN, without the need for action from the FLORIDA Interface (*for more details on the Foster Care Eligibility topic see Title IV-E Foster Care Eligibility Topic Paper*).

In FLORIDA, many of the data elements needed to be eligible and reimbursable for Title IV-E Foster Care are the same criteria to be eligible for Medicaid. When instances arise in which these programs differ, the data elements will be described separately for clarification.

The removal of a child from home to a paid Out of Home Placement triggers an event for the user to complete a Title IV-E Foster Care and Medicaid determination. In some cases, the child may be removed to an emergency shelter prior to being placed in a licensed foster care placement. In the event this occurs, the Medicaid only eligibility data can be passed to FLORIDA for processing through the FSFN/FLORIDA Interface using a FLORIDA living arrangement code of 27 (Medicaid only). For Out of Home Placements that have a frequency of Daily, the board rate input in the FLORIDA system will be equal to the daily rate x the number of days in the month the placement was approved. As the ACFC screen will not accept 'cents', the board rate number sent to FLORIDA will be rounded to the nearest round number using the normal rounding process.

In FSFN, when a paid Out of Home Placement is created and approved, a Title IV-E Foster Care Eligibility record is created automatically by the system with the status of pending. The 'Eligibility Determinations Due Report' alerts Rev Max workers that a child has been removed and placed in a paid Out of Home placement and that an Initial Eligibility Determination will need to be completed. The FSFN user will proceed to document the Basic tab and the Initial (determination) tab on the Title IV-E Foster Care Eligibility page in FSFN. The Basic tab in FSFN will capture the details such as the type of removal, household child was removed from, and will display demographic information for the child. The child demographic information that was captured in the Person Management record includes DOB, age, and SSN, if available. The Rev Max specialist/supervisor will be responsible for verifying any information that is pre-filled by the system including the demographic information for the child. If the Title IV-E Foster Care Eligibility has not been completed and a Medicaid Eligibility is submitted to FLORIDA, it will be treated as a Medicaid Only submission. Once the Title IV-E Foster Care Eligibility record has been completed the living arrangement code will be sent over

as 28 (Foster Care). Similarly, if a Title IV-E Adoption Eligibility record has been created but not completed (approved) the living arrangement will continue to be sent over as Foster Care (28). Once the Title IV-E Adoption Eligibility has been completed (approved) the living arrangement code will be sent over as 29 (Adoption). NOTE: For both Title IV-E Foster Care and Title IV-E Adoption, if the record is voided it is as if it doesn't exist, and the living arrangement code will be sent based on the logic identified above.

When a Title IV-E Foster Care Initial Determination is completed a Medicaid eligibility record will be created if one does not exist for the child (*for details on the Medicaid page see FM03b: Medicaid Eligibility*). Alternately, if a Title IV-E determination is not documented, the user also has the ability to manually create the Medicaid Eligibility in order to submit a Medicaid only application. After completing the Medicaid module, the Rev Max Specialist/Supervisor selects the 'Submit to FLORIDA' hyperlink from the Actions group box, indicating the record is ready to be processed to FLORIDA by the FSFN/FLORIDA Interface. Each time the 'Submit to FLORIDA' hyperlink is selected, an electronic record is created. Twice per day all electronic records created up to that point are collated into a single file and sent to a secure server. The process of collating the records into a file is performed twice per day at approximately 10:00am and 3:00pm. These records are then picked up by a process in FLORIDA that begins at 11:30am and 4:30pm. Prior to the file being processed by FSFN at the designated times, if there are multiple change records generated for the same Person ID, only one record will be included in the submission for that Person ID and will contain all the most current, updated information. Meaning, one record per Person ID per submission. Once the FSFN process runs, if there is an additional change record created for the Person ID it will be a new record in the next submission. This applies for all records types: APP; CHG and CLS.

The Rev Max Specialist have the 'Change in Placement Report' to identify when there has been a change in the placement that could result in a status change and a Title IV-E Foster Care Eligibility Redetermination will need to be completed. Once the initial approved Out of Home Placement is made, other events will cause a FSFN user to complete a Title IV-E Foster Care Eligibility Redetermination. These events are a placement change, change in assets/income, or annual redetermination. The user is notified that a redetermination is due through the 'Eligibility Determinations Due Report'. For Title IV-E Foster Care the redeterminations will be completed on the Redetermination tab of the Title IV-E Foster Care Eligibility page in FSFN.

Each time a record is either manually submitted to FLORIDA by the user or automatically generated by FSFN based on defined triggers, the data elements below are included in the record:

- FSFN Record ID

- Record Type - The file will contain one of the three Record Types: APP – New; CHG – Changes; CLS – Closure. This is derived from FSFN based on the radio button selection on the Initiate Action pop-up page. Therefore, Initial = APP; Change = CHG and Closure = CLS.
- FSFN Person ID
- First Name
- Last Name
- Suffix
- Middle Initial
- Medicare Number, if documented. This is captured as an Identification Type in Person Management which would only be sent to FLORIDA if documented in FSFN. If it does not exist in FSFN, this element will be null when the file is sent to FLORIDA from FSFN (new)
- Worker Last Name and First Name
- Worker Last Name and Worker First Name – the following defines “when” the fields populate:
 - The Worker Last Name and Worker First Name fields will NOT populate if the record sent to FLORIDA was system generated. ONLY if the record was manually submitted by a worker does the Worker Last Name and Worker First Name populate the flat file. Therefore, each time a new record is manually inserted FSFN will populate the flat file based on that specific worker, which can change from one manually inserted record to the next.
 - This is just “when” the data does or does not populate the flat file.
- The existing logic for determining “what” Worker Last Name and Worker First Name will be replaced with the logic below. As indicated in the previous bullet, it identified “when” the Worker Last Name and First Name populate. This section is identifying “what” is captured as the Worker Last Name and Worker First Name “when” it populates.
 - First look to see if the child/ youth has a current, open Removal Episode. If there is a current, open Removal Episode, FSFN will populate the flat file with the Agency Name captured in the Agency field on the Maintain Unit page for the worker, based on their profile, that submitted the record (Action = Initial, Change or Close) from the Medicaid Eligibility page – Summary tab. If the Agency Name is 16 – 30 characters, populate the Last Name field with the first 15 characters of the Agency Name and populate the First Name field with characters 16-30. IF the Agency Name

is less than 16 characters (1-15), populate the Last Name field with the Agency Name and populate the First Name field with a lower case x.

- In addition, any special characters other than dash, hyphen, period and a space must be stripped from the Agency Name when generating the flat file.
- If there is not a current, open Removal Episode look to see if the child/youth has a current, open Living Arrangement AND is 18 years of age or older based on comparing the current date to the participant's Date of Birth. If there is a current, open Living Arrangement AND the child/youth is 18 years of age or older, FSFN will populate the flat file with the child/youth's Last Name in the Worker Last Name field and child/youth's First Name in the Worker First Name field.
- If there is not a current, open Removal Episode look to see if the child/youth has a current, open Living Arrangement AND is LESS THAN 18 years of age based on comparing the current date to the participant's Date of Birth. If there is a current, open Living Arrangement AND the child/youth is LESS THAN 18 years of age, FSFN will populate the flat file with the Primary Caregiver Name captured in the Primary Caregiver field on the current Living Arrangement page for the child/youth. The Primary Caregiver will populate Last Name in the Worker Last Name field and First Name in the Worker First Name field.
- If there is not a current, open Living Arrangement look to see if the child is flagged in the database as a Post Adoption child and if so, FSFN will populate the flat file with the Providers Name and will populate the Worker Last Name with the Provider's Last Name and the Worker First Name with the Provider's First Name. FSFN will first look to see if the child/youth has an open Service with a Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider. If so, the Provider's Name will be populated from the current, open Service.
 - Because Services can be end dated in the future, the logic must look to see if the Service End Date is greater than the current date and if so, that means the Service is open and it should be used.
 - If multiple open Adoption Services exists, populate based on the newest (maximum) Service Begin Date. Again, not including Organizational Providers.
 - DO NOT populate from a Service that is ended for the Reason of "Made in Error".

- If there is not a current, open Service where the Service Category = Adoption, FSFN will populate with the Provider documented on the Adoption Subsidy Agreement Information page if the child is flagged as a Post Adoption child and has an Adoption Subsidy Agreement Information page where the Termination Reason is NOT Other.
- If multiple Adoption Subsidy Agreement Information pages exist, populate the Provider Name based on the newest (maximum) Effective Date/ Date of Agreement where the Termination Reason is NOT Other.
- If the child is NOT flagged in the database as a Post Adoption child BUT the child has an open Service with a Service Category = Adoption, FSFN will populate the flat file with the Providers Name and will populate the Worker Last Name with the Provider's Last Name and the Worker First Name with the Provider's First Name. This is the Provider documented on the current Service where the Service Category = Adoption if the child is not flagged as Post Adoption but has a current, open Service where Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider.
 - Because Services can be end dated in the future, the logic must look to see if the Service End Date is greater than the current date and if so, that means the Service is open and it should be used.
 - If multiple open Adoption Services exists, populate based on the newest (maximum) Service Begin Date. Again, not including Organizational Providers.
 - DO NOT populate from a Service that is ended for the Reason of "Made in Error".
- If none of the logic above is met, check for the most recent Removal Episode that has been discharged where there is at least 1 Out of Home Placement in that Removal that was NOT ended as "Made in Error". If so, FSFN will populate the flat file with the Agency Name captured in the Agency field on the Maintain Unit page for the worker, based on their profile, that submitted the record (Action = Initial, Change or Close) from the Medicaid Eligibility page – Summary tab. If the Agency Name is 16 – 30 characters, populate the Last Name field with the first 15 characters of the Agency Name and populate the First Name field with characters 16-30. IF the Agency Name is less than 16 characters (1-15), populate the Last Name field with the Agency Name and populate the First Name field with a lower case x.

- In addition, any special characters other than dash, hyphen, period and a space must be stripped from the Agency Name when generating the flat file.
- Current FLORIDA Case Number, if applicable
- FLORIDA PIN (if it is documented)
- Date of Birth
- Effective Date on Initiate Action Pop-Up Page
- Social Security Number (SSN)
 - Include the code value for the selected reference value from the SSN Number ? drop down, which includes the following: Yes, Applied For, Ineligible, or Exempt (new)
 - Code Values are as follows: Yes = 2747; Applied For = 2748; Exempt = 2749; and Ineligible = 2750
 - If Yes, provide the SSN
 - If Applied For, provide the Date Applied
- Citizenship
 - If Qualified Non-Citizen, include the Non-Citizen ID
- Birth Place
- Race
- Ethnicity (Hispanic/ Latino flag) - Code Values are as follows: Yes = Y; No = N; Declined = D; and Undetermined = U
- Gender
- Removal Begin Date – populated in the flat file based on the following logic and is a hierarchical approach that applies for all records populated whether manual or system generated:
 - FSFN first looks to see if the child/ youth has a current, open Removal Episode. If there is a current, open Removal Episode FSFN will populate the flat file with the Removal Begin Date.
 - If there is not a current, open Removal Episode FSFN looks to see if the child/ youth has a current, open Living Arrangement. If there is a current, open Living Arrangement FSFN will populate the flat file with the Living Arrangement Begin Date.

- If there is not a current, open Living Arrangement FSFN looks to see if the child is flagged in the database as a Post Adoption child and if so, FSFN will first look to see if the child/ youth has at least one Service with a Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider. If so, Removal Begin Date will populate with the Adoption Subsidy Service, Service Begin Date.
 - If multiple Adoption Services exist regardless if open or closed, populate the oldest (minimum) Service Begin Date. Again, not including Organizational Providers.
 - FSFN DOES NOT populate from a Service that is ended for the Reason of “Made in Error”.
 - If there is not at least one Service where the Service Category = Adoption, which is not ended as “Made in Error”, FSFN will populate with the Adoption Subsidy Agreement Information page – Effective Date/ Date of Agreement.
 - If multiple Adoption Subsidy Agreement Information pages exist, FSFN populates the oldest (minimum) Effective Date/ Date of Agreement. If the Adoption Subsidy Agreement Information page has a Termination Reason of “Other” that Adoption Subsidy Agreement Information page is NOT used. FSFN will move to the next “oldest” Adoption Subsidy Agreement Information page.
 - If the child is NOT flagged in the database as a Post Adoption child BUT the child has at least one Service with a Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider, FSFN will populate the flat file with the Adoption Subsidy Service, Service Begin Date.
 - If multiple Adoption Services exist regardless if open or closed, populate the oldest (minimum) Service Begin Date. Again, not including Organizational Providers.
 - DO NOT populate from a Service that is ended for the Reason of “Made in Error”.
 - If none of the logic above is met, check for the most recent Removal Episode that has been discharged where there is at least 1 Out of Home Placement in that Removal that was NOT ended as “Made in Error”. If so, FSFN will populate the flat file with the Removal Begin Date.
- IV-E Eligibility Status

- Pre-fills with Y or N based on if the child is eligible under Title IV-E. First, FSFN will look to see if the child is Eligible on the Title IV-E Foster Care and if yes, will populate Y; if no, FSFN will then look to see if the child is Eligible on the Title IV-E Adoption and if yes, will populate Y; otherwise, will populate N. The logic does not include Title IV-E Foster Care or Adoption Eligibility pages that have been voided or are in a pending status.
- Flag if current Removal is Voluntary (Y or N)
- Flag if child has Income (Y or N)
- Income Details
 - To determine if the child has Unearned or Earned Income, FSFN must look at Assets & Employment on both the Assets/Liabilities and Employment tabs.
 - NOTE: Please refer to the Reference Date Section (2.4.1) of this document for a list of the Unearned Income Types and their associated Code Value.
 - When looking for Unearned Income, FSFN is looking for the following:
 - Select = Unearned Income; any Unearned Income “Type” regardless if the “Use in Eligibility Calculations” flag is checked or not; and the Type is NOT one that has the “Adult” indicator. In addition, FSFN must only include those Unearned Income Types where there is either NOT an Eff. End Date OR the Unearned Income has been ended in the last 30 days. This does not mean that the Eff. End Date is within the last 30 days, but that the Unearned Income, regardless of the End Date, was ended in the last thirty days.
 - If there is Unearned Income to include, the following elements must be included in the flat file: Unearned Income Type; Eff. Start Date and Eff. End Date (if applicable).
 - When looking for Earned Income, FSFN is looking for the following:
 - Any Employment Income captured on the Employment tab. In addition, FSFN must only include those Employment records where there is either NOT an Eff. To Date OR the Employment record has been ended in the last 30 days.

This does not mean that the Eff. To Date is within the last 30 days, but that the Employment record, regardless of the Eff. To Date, was ended in the last thirty days.

- If there is Employment income to include, the following elements must be included in the flat file: Type is flagged as “Employment”; Eff. From Date; Eff. To Date; Employer Name; and the monthly amount of income.
 - NOTE: If the Employment income amount is not captured on the Employment pop-up page as a “monthly” amount FSFN must calculate the amount of Monthly Income, which is as follows:
 - Annually
 - Wages/12
 - Every 6 Months
 - Wages/6
 - Quarterly
 - Wages/3
 - Monthly
 - Wages
 - Twice a Month
 - Wages *2
 - Every Two Weeks (Bi-Weekly)
 - Wages *2.14
 - Weekly
 - Wages * 4.3
 - Hourly
 - Hourly Rate * Number of Hours Per Week; then take the Weekly Amount and multiply by 4.3
- Living Arrangement Code of 27, 28 and 29 is sent based on the Eligibility Status as defined above

- Removal Address – populated in the flat file based on the following logic and is a hierarchical approach that applies for all records populated whether manual or system generated:
 - First look to see if the child/ youth has a current, open Removal Episode. If there is a current, open Removal Episode FSFN will populate the flat file with the Primary Caregiver’s current (no end date) Primary Residence documented on Person Management. This is the Primary Caregiver identified on the Out of Home Placement page for the current Removal Episode.
 - If there is not a current, open Removal Episode look to see if the child/ youth has a current, open Living Arrangement. If there is a current, open Living Arrangement FSFN will populate the flat file with the child/ youth’s current (no end date) Primary Residence documented on Person Management.
 - If there is not a current, open Living Arrangement look to see if the child/ youth is EITHER flagged in the database as a Post Adoption child OR has an open Service with a Service Category = Adoption. If either condition is met FSFN will populate the flat file with the child/ youth’s current (no end date) Primary Residence documented on Person Management.
 - If none of the logic above is met, check for the most recent Removal Episode that has been discharged where there is at least 1 Out of Home Placement in that Removal that was NOT ended as “Made in Error”. If so, FSFN will populate the flat file with the child/ youth’s current (no end date) Primary Residence documented on Person Management.
- Placement Address – populated in the flat file based on the following logic and is a hierarchical approach that applies for all records populated whether manual or system generated:
 - The Placement Address will populate whether the record is manually submitted or systemically generated and submitted. HOWEVER, the logic for “what” address is sent is changing as outlined below.
 - First look to see if the child/ youth has a current, open Removal Episode. If there is a current, open Removal Episode, FSFN will populate the flat file with the current Out of Home Placement Provider Address UNLESS the Service Category = Missing Child. If the Service Category = Missing Child the Placement Address MUST pre-fill from the most recent Out of Home Placement where the Service Category is NOT equal to Missing Child AND it was not ended as “Made in Error”. If the ONLY Out of Home Placement in the Removal Episode that is NOT ended as “Made in Error” is the Service Category of Missing Child, ONLY THEN use that

Provider's Address. NOTE: This is the Provider's address captured on either their Person Provider or Organization Provider record.

- If there is not a current, open Removal Episode look to see if the child/youth has a current, open Living Arrangement. If there is a current, open Living Arrangement, FSFN will populate the flat file with the child/youth's current (no end date) Primary Residence documented on Person Management.
- If there is not a current, open Living Arrangement look to see if the child is flagged in the database as a Post Adoption child and if so, FSFN will first look to see if the child/youth has an open Service with a Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider. If so, the Provider's Address will be populated from the Provider documented on the current, open Service. NOTE: This is the Provider's address captured on their Person Provider record.
 - Because Services can be end dated in the future, the logic must look to see if the Service End Date is greater than the current date and if so, that means the Service is open and it should be used.
 - If multiple open Adoption Services exist, populate based on the newest (maximum) Service Begin Date. Again, not including Organizational Providers.
 - DO NOT populate from a Service that is ended for the Reason of "Made in Error".
 - If there is not a current, open Service where the Service Category = Adoption, FSFN will populate with the Provider's Address from the Provider documented on the Adoption Subsidy Agreement Information page if the child is flagged as a Post Adoption child and has an Adoption Subsidy Agreement Information page where the Termination Reason is NOT Other. NOTE: This is the Provider's address captured on their Person Provider record.
 - If multiple Adoption Subsidy Agreement Information pages exist, populate the Provider Name based on the newest (maximum) Effective Date/ Date of Agreement where the Termination Reason is NOT Other.
- If the child is NOT flagged in the database as a Post Adoption child BUT the child has an open Service with a Service Category = Adoption, FSFN will populate the flat file with the Provider's Address for the Provider documented on the current Service where the Service Category = Adoption if the child is not flagged as Post Adoption but has a current,

open Service where Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider.

- Because Services can be end dated in the future, the logic must look to see if the Service End Date is greater than the current date and if so, that means the Service is open and it should be used.
- If multiple open Adoption Services exists, populate based on the newest (maximum) Service Begin Date. Again, not including Organizational Providers.
- DO NOT populate from a Service that is ended for the Reason of “Made in Error”.
- If none of the logic above is met, check for the most recent Removal Episode (open or discharged) where there is at least 1 Out of Home Placement in that Removal that was NOT ended as “Made in Error”. If so, FSFN will populate the flat file with the Unit’s Physical Address on the Maintain Unit based on the following:
 - If the record generated is a manually inserted and submitted record this field will populate based on that specific worker’s profile under which they are logged in.
 - If the record generated is a systematically generated and submitted record this field will populate based on the most recent worker’s Unit Address that manually inserted and submitted a record prior to the systematically generated record.
- Notification Address – populated in the flat file based on the following logic and is a hierarchical approach that applies:
 - The Notification Address will populate whether the record is manually submitted or systemically generated and submitted. HOWEVER, the logic for “what” address is sent is as outlined below.
 - First look to see if the child/ youth has a current, open Removal Episode. If there is a current, open Removal Episode, FSFN will populate the flat file with the Unit’s Physical Address on the Maintain Unit based on the following:
 - If the record generated is a manually inserted and submitted record this field will populate based on that specific worker’s profile under which they are logged in.
 - If the record generated is a systematically generated and submitted record this field will populate based on the most recent worker’s

Unit Address that manually inserted and submitted a record prior to the systematically generated record.

- If there is not a current, open Removal Episode look to see if the child/ youth has a current, open Living Arrangement AND is 18 years of age or older based on comparing the current date to the participant's Date of Birth. If there is a current, open Living Arrangement AND the child/ youth is 18 years of age or older, FSFN will populate the flat file with the child/ youth's current (no end date) Primary Residence documented on Person Management.
- If there is not a current, open Removal Episode look to see if the child/ youth has a current, open Living Arrangement AND is LESS THAN 18 years of age based on comparing the current date to the participant's Date of Birth. If there is a current, open Living Arrangement AND the child/ youth is LESS THAN 18 years of age, FSFN will populate the flat file with the current (no end date) Primary Residence documented on Person Management for the Primary Caregiver selected on the child/ youth's current Living Arrangement page.
- If there is not a current, open Living Arrangement look to see if the child is flagged in the database as a Post Adoption child and if so, FSFN will first look to see if the child/ youth has an open Service with a Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider. If so, the Provider's Address will be populated from the Provider documented on the current, open Service. NOTE: This is the Provider's address captured on their Person Provider record.
 - Because Services can be end dated in the future, the logic must look to see if the Service End Date is greater than the current date and if so, that means the Service is open and it should be used.
 - If multiple open Adoption Services exists, populate based on the newest (maximum) Service Begin Date. Again, not including Organizational Providers.
 - DO NOT populate from a Service that is ended for the Reason of "Made in Error".
 - If there is not a current, open Service where the Service Category = Adoption, FSFN will populate with the Provider's Address from the Provider documented on the Adoption Subsidy Agreement Information page if the child is flagged as a Post Adoption child and has an Adoption Subsidy Agreement Information page where the Termination Reason is NOT Other. NOTE: This is the Provider's address captured on their Person Provider record.

- If multiple Adoption Subsidy Agreement Information pages exist, populate the Provider Name based on the newest (maximum) Effective Date/ Date of Agreement where the Termination Reason is NOT Other.
- If the child is NOT flagged in the database as a Post Adoption child BUT the child has an open Service with a Service Category = Adoption, FSFN will populate the flat file with the Providers Address for the Provider documented on the current Service where the Service Category = Adoption if the child is not flagged as Post Adoption but has a current, open Service where Service Category = Adoption AND where the Provider on the Service is NOT an Organizational Provider.
 - Because Services can be end dated in the future, the logic must look to see if the Service End Date is greater than the current date and if so, that means the Service is open and it should be used.
 - If multiple open Adoption Services exists, populate based on the newest (maximum) Service Begin Date. Again, not including Organizational Providers.
 - DO NOT populate from a Service that is ended for the Reason of “Made in Error”.
- If none of the logic above is met, check for the most recent Removal Episode that has been discharged where there is at least 1 Out of Home Placement in that Removal that was NOT ended as “Made in Error”. If so, FSFN will populate the flat file with the Unit’s Physical Address on the Maintain Unit based on the following:
 - If the record generated is a manually inserted and submitted record this field will populate based on that specific worker’s profile under which they are logged in.
 - If the record generated is a systematically generated and submitted record this field will populate based on the most recent worker’s Unit Address that manually inserted and submitted a record prior to the systematically generated record.
- Comments field from Initiate Action pop-up page
- **NOTE:** All “address” fields provided in the flat file, such as Provider Address, Placement Address, etc., from FSFN to FLORIDA will be broken out separately as they are currently broken out in the FSFN tables and not provided as one long string separated by commas.
- A TAG File will be sent from FSFN to FLORIDA which identifies the number of records sent in the send file to ensure that the full file is

- received by FLORIDA. The TAG file will include the number of records and the date/time stamp that the file was completed.
- A TAG File will be received by FSFN from FLORIDA which identifies the number of records in the received file to ensure that the full file is received by FSFN. The TAG file will include the number of records and the date/time stamp that the file was completed.

Each time a record is received from FLORIDA, whether it is a file received as the result of a submission to FLORIDA via the Summary tab on Medicaid Eligibility or the result of a change originating from FLORIDA and therefore is captured on the FLORIDA Changes pop-up page, FSFN will validate that the current FLORIDA PIN # captured on Person Management in FSFN, within the Identification Type group box, matches what was sent from FLORIDA for that particular Person ID.

- If the FLORIDA PIN # received from FLORIDA is different from the current FLORIDA PIN # captured on FSFN Person Management, FSFN will update the current FSFN FLORIDA PIN # and capture it as the “Previous FLORIDA PIN #” and replace what was the current FSFN FLORIDA PIN # with the FLORIDA PIN # received from FLORIDA.
 - **NOTE 1:** Please refer to the Person Management Section of this document for additional details regarding the current FLORIDA PIN # versus Previous FLORIDA PIN #.
 - **NOTE 2:** In Cases of Pre- and Post- Adoptive Children, the original Pre-Adoptive PIN # will be captured on the Pre-Adoptive Person Management record and will not be modified. Only the Post-Adoptive Person Management record will reflect the original Pre-Adoptive PIN # as the “Previous FLORIDA PIN” and the updated FLORIDA PIN # as the current.
 - **NOTE 3:** This is assuming that FLORIDA will be sending both the original PIN and new PIN to FSFN and is currently captured in the FLORIDA MES Design Documentation.

If a change is made to any of the following elements, FSFN automatically generates a change record on the Medicaid Eligibility page, under the Summary Tab, and submits the data that has changed and includes the Person ID in the file:

- First Name changes
- Last Name changes
- Suffix changes
- Middle Initial changes
- Date of Birth changes
- Social Security Number changed

- Date Applied, if applicable
- Citizenship changes
 - If Qualified Non-Citizen, include the Non-Citizen ID
- Placement is ended or Removal discharged
- New Removal or Placement created
- Child's current Primary Residence on Person Management changes
- IV-E Eligibility Status changes
- Income changes
- Notifications Address

When a change occurs in FLORIDA, a new row will be added to the FLORIDA Changes Pop-Up page for the FLORIDA Case Number that contains the Program Code, Program Sub Code, Program Sequence Number, Status, Reason Code, and Reason Code Text from the FLORIDA Interface.

(For additional information regarding the FLORIDA Changes Pop-Up page, please refer to the Medicaid Eligibility Topic Paper)

All Title IV-E Adoption Eligibility determinations are handled completely in FSFN, without the need for action from the FLORIDA Interface *(for more details on the Adoption Eligibility topic see FM03c: Title IV-E Adoption Eligibility)*. Please note that the FLORIDA living arrangement code of 27, 28, and 29 are still passed to FLORIDA. For this particular scenario, the living arrangement code of 29 applies.

1.3 Interface Process Overview

The interface process is a two-way interface. This interface will transmit eligibility data from FSFN through IMS Connect to FLORIDA and places an entry into the 'ACCESS Management System (AMS) Child In Care Work Management' queue for CIC approval.

Prior to submission, a series of edits will validate the demographic data before it is passed to FLORIDA. The individual participants' Social Security Number, First Name, Last Name, Date of Birth, Gender, and Race will serve as the initial search criteria for finding potential matches in Florida Operational Data Store (FL ODS). Another edit includes that the forward and reverse relationship must be documented for all people submitted to FLORIDA. The Interface will return results from the search against FL ODS to the FSFN/FLORIDA Search page *(for details see FM03b: Medicaid Eligibility and SM04a Maintain Case)*.

The Rev Max Specialist/Supervisors can encounter numerous scenarios at this point. The possible scenarios include the following, but are not limited to:

- If during Initial Determination the Rev Max specialist verifies an exact match or a match with a minor discrepancy for the individual participant's demographics on an active FLORIDA case, then the user will review the Details Pop-up page, make a decision based on the participant status, and the active benefits for case, and determine how to proceed. If the user makes the decision to select the record, they will click the Continue button. The selected participant's information will be returned to the FLORIDA tab and stored in the appropriate FLORIDA group box. This record will be used for future interface transactions with FLORIDA utilizing the FLORIDA Case Number and participants FLORIDA Pin.
- If during FL ODS Search the Rev Max Specialist verifies there is no match on participant's demographics, the Rev Max Specialist can select the 'Create' button and return to the FLORIDA tab. The FLORIDA group box will pre-fill the same FSFN person record used in the search criteria and will be formatted similarly to FLORIDA field sizes.
- If during the FL ODS Search the Rev Max Specialist verifies that the Child's demographics are a match, but the child has an active status in a FLORIDA case receiving Medicaid benefits, then the Rev Max Specialist can request manual intervention by clicking the 'Request CIC Intervention' check box on the Medicaid page. By checking this 'Request CIC Intervention' check box, the Interface will send the data to the 'AMS CIC Work Management' queue for manual data entry or update to the existing case.
- If during the FL ODS Search the Rev Max Specialist verifies the demographics match for a participant in a closed FLORIDA case with an inactive status, then the worker will open a new case in FLORIDA for this child using the existing PIN of the individual but starting the application from the client registration process (CRCC).
- When attempting to 'Submit to FLORIDA', the documentation of relationships is validated. Child to Parents/Caregiver as well as Parent/Caregiver to Parent/Caregiver must be documented on Person Management before the submission is successful.

After the eligibility data has been reviewed and submitted, the record will be placed in the 'FSFN JMS Message' queue infrastructure. The Interface will transmit the isolated eligibility transaction to FLORIDA, individually utilizing a shared FLORIDA login. These eligibility transaction processes will be recorded in the Audit Log Database. There will be no more than eight FSFN processes interacting with FLORIDA concurrently and will be available for processing during FLORIDA business hours.

The Child in Care Application will be generated for the CIC worker to review the information processed. The application will be generated by the Interface as it processes the screens in the FLORIDA system. The application can be used by the CIC worker and mimics the screen in the FLORIDA system. If the user ‘requests CIC intervention’, the CIC application will not be created because the application goes straight to the worker manger queue and does not process any of the pages in FLORIDA.

The Application Entry Sequence (ASCC) driver is invoked for initial determinations and the (ASRE) driver is invoked for a change in eligibility utilizing the FLORIDA case number. The interface will complete transmission of the data at the Shelter and Utility Questions (AFSQ) screen, where the FLORIDA Interface will transfer the case to the appropriate CIC worker for approval or denial.

The interface will write a row in the ‘AMS CIC Work Management’ queue, which will provide the CIC worker with a link to the appropriate Word document(s) that will support the manual intervention entry process or final approval request for automated submittals. These documents will be stored in the FSFN Imaging Database. The CIC worker will view these document and manually walkthrough the CIC drivers to complete the appropriate action.

Once the CIC worker has approved the eligibility determination, the FSFN Java batch process will pull the Medicaid Eligibility Status, Effective To date, Effective From date, Program Type, Medicaid Number, and the Eligibility Status. When a case closure request has been submitted, Closure Date and Closure Reason will also be returned.

1.3.1 Create New Case after Finalization Interface Logic

A field will be added to the MEDICAID_ELIG table named POST_ADOP to identify that this Medicaid Eligibility was created by the Create New Case after Finalization process in a post-adoptive case. (Note: The details of the record that will be created are outlined in the Create New Case after Finalization process. Also, the POST_ADOP field will not be accessible or viewable through the FSFN application.) This field will be set to ‘P’ initially to allow the Initial radio button to be available in the post adoptive case.

- a. When the user selects the ‘Initial’ action in FSFN, the FLORIDA tab will be enabled and editable. Upon submission of the Initial to FLORIDA, the FLORIDA tab will be frozen and not user editable. This transaction will be submitted as (IVEFC) Non-Waiver Title IV-E.
- b. If the ‘Initial’ radio button is selected in a Medicaid Module that already has a FLORIDA case number, when the user submits a record to FLORIDA, the FLORIDA Interface will automatically check the Request CIC Intervention checkbox and the request will be sent to the CIC worker for manual processing. The POST_ADOP field will be set to ‘I’ indicating

that an Initial has been submitted in a post adoptive case. The ‘Initial’ radio button will be grayed out on the Medicaid Certification page after the ‘Initial’ record has been submitted to FLORIDA. (Note: the Adoption Eligibility will be sent directly to the CIC worker’s inbox so that the CIC worker can make the most appropriate decision on how this record should be processed. This will also reduce the need for the CIC workers to do the work twice if an erroneous record is created).

- c. For additional information as to the Create New Case after Finalization process and the edits in place which must be met in order to place a child in a Post Adoptive Case, please refer to the SM04a: Maintain Case Topic Paper.

1.3.2 Florida Interface Return Batch Job Logic

This is the hierarchy that will be used to determine what information will be transmitted to FLORIDA when a user selects ‘Submit to Florida’ from the Actions group box in the Medicaid module. This hierarchy is used to facilitate the automation of the FLORIDA Interface based on the status of specific pieces of work at the time the ‘Submit to Florida’ option is selected.

- a. If a Title IV-E Adoption Eligibility records exists and is approved, non-voided, non-terminated and the approval date is greater than the approval date of the most recent Out of Home Placement, the record will be submitted to FLORIDA as an adoption eligibility request.
- b. If all Title IV-E Adoption records have been voided or terminated, one does not exist or one does exist and is not approved or the approval date of the Title IV-E Adoption Eligibility is less than the approval date of the most recent Out of Home Placement and an independent living record does not exist for this child and a completed, non-voided Title IV-E Foster Care Eligibility exists, the record will be sent as a foster care IV-E eligibility request.
- c. If all Title IV-E Adoption records have been voided or terminated, one does not exist or one does exist and is not approved or the approval date of the Adoption Eligibility is less than the approval date of the most recent Out of Home Placement and a completed, non-voided Title IV-E Eligibility does not exist, the record will be sent as Medicaid only eligibility request.

Scenario 1:

Submitted as Medicaid Only (NONIVEES) from FSFN to FLORIDA

- Returned from FL as any program code listed in the Appendix A
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1,

parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).

- Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number as a Primary Medicaid Number
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then FSFN batch will not do anything.

Scenario 2:

Submitted as Title IV-E (IVEFC) from FSFN to FLORIDA

Note: Even though the Title IV-E Adoption Eligibility is determined within FSFN, the system still delivers a Medicaid Eligibility.

- Returned from FL as one of the Medicaid only code i.e. MCFE, MCFN, or NCFN.
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
 - Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number as a Primary Medicaid Number.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then FSFN batch will not do anything.

- Returned from FL as MCFE, MCFN, or NCFN

- Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
- Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number as a Primary Medicaid Number.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then the FSFN batch will not do anything.
- Create an entry in the Eligibility Change module
 - If there is a status match, then one record is inserted into the Eligibility Change.
 - If there is a status mismatch, then two records will be inserted into the eligibility change module: one with the FSFN status and later with the FLORIDA status.
- Returned from FL as MCFE or MCFN (IV-E Adoption Eligibility)
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
 - Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number as a Primary Medicaid Number.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then the FSFN batch will not do anything.
 - Create an entry in the Eligibility Change module

- If there is a status match, then one record is inserted into the Eligibility Change.
- If there is a status mismatch, then two records will be inserted into the eligibility change module: one with the FSFN status and later with the FLORIDA status.

Scenario 3:

Submitted as Adoption Subsidy (ADSUB) from FSFN to FLORIDA

- Returned from FL as one of the Medicaid only code i.e. MCFE, MCFN, NCFN
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
 - Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number as a Primary Medicaid Number.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then FSFN batch will not do anything.
 - Create an entry in the Eligibility Change module
 - If there is a status match, then one record is inserted into the Eligibility Change.
 - If there is a status mismatch, then two records will be inserted into the eligibility change module: one with the FSFN status and later with the FLORIDA status.
- Returned from FL as MCFE, MCFN, or NCFN
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
 - Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned

- from FLORIDA, then the FSFN batch will insert the Medicaid number a Primary Medicaid Number.
- If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then FSFN batch will not do anything.
 - Create an entry in the Eligibility Change module
 - If there is a status match, then one record is inserted into the Eligibility Change.
 - If there is a status mismatch, then two records will be inserted into the eligibility change module: one with the FSFN status and later with the FLORIDA status.
 - Returned from FL as MCFE or MCFN (IV-E Adoption Eligibility)
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
 - Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number a Primary Medicaid Number.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then FSFN batch will not do anything.
 - Create an entry in the Eligibility Change module
 - If there is a status match, then one record is inserted into the Eligibility Change.
 - If there is a status mismatch, then two records will be inserted into the eligibility change module: one with the FSFN status and later with the FLORIDA status.

Scenario 4:

Submitted as Change from FSFN to FLORIDA

- Returned from FL as any program code listed in the Appendix A
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
 - Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number as a Primary Medicaid Number.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then FSFN batch will not do anything.

Submitted as Close from FSFN to FLORIDA

- Closure submitted to FL, FL returns any program code listed in the Appendix A or MCFE, MCFN, or NCFN and 'C' is returned from FLORIDA.
 - Update the Medicaid module i.e. update the program type, status, FLORIDA case number, FLORIDA Medicaid pins of child, parent1, parent2, insert FLORIDA_PART entries if they don't exist in the FSFN system (occurs during CIC Intervention submission).
 - Update Person Identification with the FL Medicaid number
 - If there isn't a Medicaid number in existence for a person in the Person Management and if a new Medicaid number is returned from FLORIDA, then the FSFN batch will insert the Medicaid number as a Primary Medicaid Number.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if a new number is returned from FLORIDA, then the FSFN batch will update the existing Medicaid number as secondary and inserts the new Medicaid number as primary.
 - If there is a primary Medicaid number in existence for a person in the Person Management and if the same number is returned, then FSFN batch will not do anything.

Medicaid Action Type	Medicaid CD_CERT number
Initial	1
Change	2
Close	4

1.3.3 Background Processing

- None

1.3.4 Error Processing

- The FSFN Rev Max Specialist will complete all the decisions up front in FSFN. Once the Eligibility data is submitted to FLORIDA, the data will be passed to ‘FSFN JMS Message’ Queue. If the FLORIDA system is down, the queue will hold the eligibility data until FLORIDA is up. The queue will automatically process the request into FLORIDA once it is back on-line.
- If FL ODS is down during an initial submission, then the FSFN Rev Max Specialist will not submit Eligibility data until the system is up. However, if FL ODS is down during Change or Close, the Rev Max Specialist will still be able to submit to FLORIDA.
- If an error occurs during the Eligibility transaction while going through the FLORIDA screens, then the application will be sent to the ‘AMS CIC Work Management’ Queue for CIC worker intervention. The CIC worker will reference an electronic read only Word version of the application and manually complete the FLORIDA screens. This document will also contain the FSFN Person IDs, FSFN Case Number, and the FSFN Rev Max Specialist information. Once the CIC worker has completed and approved the determination, the feedback of data to FSFN will continue to take the automated route.
- FSFN does not interface directly with FMMIS. Availability dependencies that exist today between FLORIDA and these systems will remain as is. FSFN Interfaces directly with FL ODS database.

1.3.5 Requirements

- BAFO- 006
- BAFO- 007
- BAFO-008
- CON- 002
- FMC- 004

- FME- 003
- INF- 001
- INF- 002
- INF- 003
